

Profile:

Impact Solutions Group specializes in the production of drilling fluids.

- LCP2000 is a selected blend of organic flakes, fibres and inorganic granules, which is used as a lost circulation pill with virtually any mud system.
- FLC2000 produces an ultra-low invasion mud from virtually any water, oil or any synthetic based system.

It offers selected drilling, which is based on the micro-flux control method, designed to incorporate existing pressure and drilling control equipment.
